Recommended Maintenance For Indoor Woodbacked Wall Padding

1. Check top and bottom of each and all panels to ensure that they are firmly fastened to the structure. Secure any loose panels.
2. Check each and all panels for tears, rips, or excessive wear. Torn, ripped, or deteriorated panels should be promptly repaired or replaced (depending upon extent of condition) to prevent further damage or injury.
3. Vinyl covers should be cleaned with a mild detergent and water. We use a 1:1 ratio of water and commercial cleaner Formula 409 in our warehouse, as this mixture cleans thoroughly and will not strip artwork from the vinyl surface.

These procedures should be performed at least once every six months to ensure continued proper protection from your wall panels.
